Tribal Home Visitation Services

DRAFT

Home Visitation Services Definitions

Early Head Start

Head Start and Early Head Start are comprehensive child development programs, serving children from birth to age five, expectant mothers and families. The overall goal of Head Start is to increase the social competence of children in low-income families and children with disabilities, and improve the chances of success in school.

County Public Health

North Dakota local public health units have a long history of providing personal and population based health services to residents in their city and/or county jurisdictions. The local public health infrastructure represents the capacity and expertise necessary to carry out services and programs. Therefore, the health units function differently and offer an array of services. The most common activities and services provided by local public health are child immunizations, adult immunizations, tobacco use preventions, high blood pressure screening, injury prevention screening, blood lead screening and Early and Periodic Screening Diagnosis and Treatment.

Early Intervention

Early Intervention means early assistance. This program is designed to identify children at risk in the earliest stages, when the right help can make all the difference. If you know a child who may benefit from this program, please contact the Department of Human Services.

Family Partnership

Nurse-Family Partnership is evidence-based community healthcare program that empowers low-income, first time mothers to become confident parents and strong women by partnering them with nurse home visitors. This trusted relationship instills a level of confidence in the first-time moms that will help them guide them and their children to successful futures.

Healthy Families

Lutheran Social Services Healthy Families provides free, voluntary home visitation services to support overburdened expectant parents and parents of newborns in creating a safe and healthy home. The program's goal is to improve the health and well-being of mothers, fathers, infants and young children. Paraprofessionals offer education and assistance with parenting, child development and reducing family stressors.

Right Track

Is a child find toddler that may be at-risk for developmental delays. This is accomplished through formal multidisciplinary developmental screenings, referrals to appropriated services as needed, and educating families regarding their child's development. Each region in the state has a Right Track program that screens infants and toddlers for potential developmental delays.
